## Public Announcement

On February 6, 2017, the Canadian Food Inspection Agency (CFIA) notified City of Hamilton Public Health Services that a deceased cat originating from rural Glanbrook tested positive for rabies. Hamilton Public Health Services is working together with Haldimand-Norfolk Health Unit and Brant County Health Unit to determine if any local individuals came in contact with a rabid cat.

Hamilton Public Health Services is asking anyone who may have lost, abandoned, fed, or came in contact with a male adult orange tabby cat in the area bounded by Rymal Road to the north, 5<sup>th</sup> Line to the south, Fletcher Road and Harrison Road to the east, and Pauline Johnson Road to the west (see attached map) between Sunday, January 22 and Monday, January 30, 2017 to contact their local health unit to determine whether or not they need rabies post-exposure vaccine. Six Nations residents can call 519-445-2672. Six Nations Public Health staff can help determine risk of exposure to rabies, and provide information about rabies post-exposure vaccine.

### Protect your family and pets from rabies:

- Avoid contact with live or dead animals including raccoons, skunks, bats, as well as unknown dogs and cats. Do not feed, help, or relocate any wildlife or keep them as pets.
- Vaccinate pets against rabies, and keep rabies vaccinations current for dogs and cats to protect them, and prevent any spread to people.
- Report animal bites and scratches to Six Nations Public Health by calling 519-445-2672. Wash wounds with soap and water, and seek medical attention.
- Report sick, injured, or strange behaving wildlife to Six Nations Wildlife by calling 519-445-0330.
